A 3M Digital Wall Display offers video projection and audio capabilities through the built-in Projector and Audio Speakers.

To display a laptop computer through a 3M Digital Wall Display, you must do the following:

- Turn on 3M Digital Wall Display Whiteboard by pressing the **Orange Oval Power Button** located in the center/bottom of the whiteboard
- Plug in the **video (VGA) cable** to the laptop.
- Plug in **audio cable** to the laptop (if you want to have sound through the screen built-in speakers)
- Turn on Laptop

**Note:** If you do not see laptop's image on the screen, the image needs to be sent by pressing the **Fn F5 keys** on the laptop. The laptop's screen will go dark and the image will be on the touch screen. If you want the image displayed on the laptop as well as the touch screen press the **Fn F5 keys** on the laptop again. On some laptop models you will need to press the **Fn F8 keys**.
